

tailor-made designs

interactive layouts

customized programming

web-based marketing

IT expertise

website maintenance

The Planning Center provides website design services to both public and private sectors. Our designs are custom to your specific needs. Our IT development team gives us an edge over other web design firms that have familiarity solely with design issues but not with the technical knowledge for the implementation of your website.

We can provide basic graphic design services for simple websites or even incorporate your design layouts to a web-based format. We can develop complex web-based interfaces through customized programs or Flash designs to go beyond what traditional websites can offer. We work closely with our clients to meet their web-based marketing needs.
