The Planning Center provides award-winning landscape architecture services to both the public and private sectors. Our designs are based on economic and ecological principles, including the use of indigenous materials, xeriscape techniques, and regionally-appropriate design.

Our staff maintains a thorough working knowledge of local landscape ordinances to ensure seamless implementation of our landscape plans. Careful consideration is given to site constraints and opportunities, economic factors, and jurisdictional regulations. Our proven success is based on understanding the fundamental design relationships between the natural and built environments.
