estimates

sampling and
reports

accurate and
efficient methods

cost-effective
approach

We provide a comprehensive approach to Native Plant Preservation Ordinance (NPPO) compliance from project initiation through completion. Our services follow the NPPO process from field work and site inventory, to plan and report preparation, to NPPO mitigation options, through submittal and approval by the relevant jurisdiction.

Our NPPO plans and report services include a full inventory of native protected species, a report, and mitigation plans. Our custom computer programs help calculate mitigation numbers and aid the client in finding the best resolution to mitigation requirements.

When appropriate, we offer an NPPO Preliminary Analysis Service which occurs during the feasibility phase of the project. Significant vegetation is inventoried by geographic positioning system. This is not a complete inventory of the site but rather a sampling resulting in estimations and projections that help make project decisions.
